EVOX

# ACCESSPORT

Right now your performance vehicle is a sleeping beast - it's time to wake it up. The AccessPORT is the perfect all-in-one solution to harness your car's true ability. Never cut or solder a wire again. Unlock hidden power using the ECU reflash capability. Prevent a dealership trip using the diagnostic capabilities. Save money using the fuel economy meter. Monitor performance using the live gauges and performance meters. Have it all with the AccessPORT.

## Features

- On-the-fly map switching
- Monitor vehicle sensor data and display in analog or digital format
- Vibrant color graphic display
- Read/Clear engine trouble codes
- Preloaded with performance, economy and convenience maps
- Update via the Internet
- Measure 0-60 and ¼ mile times
- Adjustable on-screen Shift Light functionality
- Estimates horsepower and torque
- Displays current and averaged fuel economy
- Drag race simulation with reaction time and "time slip"
- Built in on-screen help mode function
- Multi-Language support
- RoHS compliant (Lead Free Design)
- Can be custom tuned by our network of AccessTUNERS

## Stage 2 Power

With our Stage 2 Power Package for the Mitsubishi Evolution X, you'll enjoy significantly improved turbo response, significant torque gains at low engine RPMs, and more power under any occasion.

To achieve these gains we replace the restrictive factory exhaust with our high quality turbo-back exhaust system that, in addition to performance, produces a sporty and purposeful exhaust note.

To ensure optimal compatibility, the AccessPORT is utilized to re-tune the engine computer (ECU) for maximum benefits.

# COBB Tuning Performance Products for EVO X

## SF Intake

The SF Intake utilizes our custom design to maintain optimal flow and net the ideal performance. The custom conical cloth filter feeds filtered air directly to the engine, while maintaining optimal intake velocity and minimizing turbulence found with many aftermarket intake systems. The COBB Tuning SF Intake system is compatible with Stage 1 and Stage 2 OTS (off the shelf mapping) provided for our AccessPORT ECU tuning device.

## Hard Pipe Kit

The Evo X hard pipe kit was designed to eliminate the factory rubber hoses tendency to expand under boost. The reduction of expansion will result in increased throttle response and will improve the time needed to achieve full boost. We also improved overall flow by reducing bends and increasing inside piping diameter.

## Stage 2 Suspension Package

The Stage 2 Suspension package is our premier suspension offering for your EVO X that will enhance the balance and stability without comprising the overall ride quality. Combining our tailored Sway Bar Kit with our in house designed Sport Springs, gives your EVO X an aggressive stance that will reward you with improved handling.

## Turbo Inlet Hose

The high flow Turbo Inlet Hose utilizes a custom steel reinforced silicone design that eliminates the issue of hose collapse that other inlet pipes suffer while under suction at peak air flow. The true taper design of the COBB Inlet Hose increases the air flow volume that is delivered directly to your turbocharger, providing much more efficient power and response. The smooth inner walls of the COBB Turbo Inlet reduce the air turbulence that occurs in the factory accordion style inlet.

## Stainless Steel 3" Downpipe & Test Pipe

Designed specifically for the new EVO X and made of 304 stainless steel mandrel bent tubing, this downpipe can be fitted with the OEM cat back exhaust or our COBB Tuning Catted Test Pipe and performance Cat Back system.

The Test Pipe is a direct bolt in for the EVO X, the COBB test pipe with high flow cat is a replacement for the factory catalytic converter. Our test pipe will work with the OEM exhaust as well as any exhaust that would keep the factory catalytic converter.

## Double Adjustable Short Throw Shifter

Our revolutionary Double Adjustable Shifter ushers in a new generation of adjustability for one of the most critical links from driver to car with the ability to control both the height of the shifter as well as the throw.

## About COBB Tuning

Headquartered in Salt Lake City, Utah, COBB Tuning is an automotive engineering company dedicated to providing professionally engineered, thoroughly tested solutions and components that improve the vehicle's performance, and your driving experience.

Founded in 1999 by Trey Cobb, the company has focused exclusively on enhancing the driving experience by creating ultra-high quality, thoroughly engineered products in a total vehicle-platform approach.

Whether it's our state of the art AccessPORT ECU programmer, an aggressive racing suspension design, or perhaps a full test on our chassis dynamometer, COBB is a one-stop firm with an enviable set of qualified skills and the exceptional ability to design, engineer and test our own products under one roof. Our focus has positioned the company as the leading supplier of advanced vehicle performance engineering.
